

AI Trainer – Part-Time / Remote

Company: YoungIT Consulting Services GmbH, Germany

Work Mode: Remote

Role Type: Part-Time

Target Learners: School students and young learners (Students will be from India and later from other countries)

We are looking for an enthusiastic and technically capable **AI Trainer** who can teach Artificial Intelligence, Python, Generative AI, and modern AI tools to students in a practical, simple, and engaging manner.

The role includes both **conducting live classes** and supporting the preparation and continuous improvement of our AI training programs.

Key Responsibilities

- Conduct live online AI classes for students.
- Explain technical concepts in a simple and learner-friendly manner.
- Prepare students through practical exercises, demonstrations, assignments, and projects.
- Help students build small real-world AI applications and projects.
- Prepare and improve course material, presentations, exercises, quizzes, and assessments.
- Review student assignments and provide feedback.
- Research and test new AI tools and technologies that can be introduced into the curriculum.
- Support development of new AI courses and learning modules.
- Participate in internal discussions or demo sessions when required.
- Maintain proper updates regarding assigned work and completed activities.

Daily Task Sheet

The trainer will normally receive a **daily task sheet** containing activities that need to be completed.

Tasks may include:

- Course preparation
- Content development
- Creating assignments and exercises
- Preparing upcoming classes
- Testing AI tools
- Developing example projects
- Reviewing student work
- Research activities
- Updating existing course material
- Other AI training or course-development-related activities

The assigned activities should normally be **completed and updated in the task sheet by the end of the day**, unless another deadline has been agreed.

Technical Knowledge

Candidates should have practical knowledge of several of the following areas:

- Python programming
- Artificial Intelligence fundamentals
- Machine Learning fundamentals
- Generative AI
- Large Language Models (LLMs)
- ChatGPT, Gemini, Claude, Microsoft Copilot, or similar AI tools
- Prompt Engineering
- AI APIs and integrations
- AI chatbot development
- Building simple AI-powered applications
- Retrieval-Augmented Generation (RAG)
- AI Agents / Agentic AI
- AI automation
- Tools such as n8n, Make, or similar automation platforms
- Basic concepts related to datasets, model training, and data handling
- Responsible AI, privacy, AI safety, and ethical use of AI

Knowledge of additional modern AI frameworks, libraries, or development tools will be considered an advantage.

Candidates are not expected to be experts in every technology listed above. Strong AI fundamentals, practical experience, willingness to learn, and the ability to teach effectively are more important.

Teaching Skills

Technical knowledge alone will not be sufficient for this role.

The trainer should be able to:

- Explain difficult concepts in simple language.
- Communicate confidently with students.
- Keep learners engaged during online sessions.
- Teach using practical examples instead of only theory.
- Encourage students to experiment and build projects.
- Adjust the explanation according to the learner's age and understanding.
- Communicate effectively in English.

Previous teaching or training experience is preferred, but candidates with strong communication skills and good practical AI knowledge may also apply.

Working Hours & Availability

This is a **part-time and flexible role**. (30 hours per week)

Since classes will be scheduled according to learner availability, candidates should have reasonable flexibility regarding their working hours.

Expected availability may include:

- Approximately **1–2 hours on Saturdays and/or Sundays**, depending on learner batches.
- Availability on weekdays depending on scheduled classes and assigned responsibilities.
- Availability for course preparation, internal discussions, demos, or other assigned tasks when required.
- Class timings may vary depending on different learner batches.

The exact schedule will generally be communicated and planned in advance wherever possible.

There may not be an equal number of classes every day or every week. The number of training hours will depend on student enrollments and active batches.

Compensation

The compensation structure will be:

Fixed Compensation: ₹8,000 per month

Plus ₹200 per hour for every live class/training session conducted.

The fixed ₹8,000 compensation covers regular responsibilities such as:

- Daily task-sheet activities
- Course preparation
- Content development
- Assignment and project preparation
- Research
- Student-support activities
- Internal coordination
- Other agreed responsibilities related to the AI training program

The ₹200 per hour payment is additional and specifically applicable to live training classes conducted with learners.

Example

If a trainer conducts **30 hours of live classes during a month:**

- Fixed Compensation: ₹8,000
- Live Class Payment: $30 \times ₹200 = ₹6,000$
- **Total Monthly Compensation: ₹14,000**

The compensation and responsibilities may be reviewed in the future based on performance, number of students, number of batches, and overall contribution.

Selection Process

Shortlisted candidates may be requested to conduct a **10–15 minute demo training session** on an AI or Python-related topic. (Over a google video call)

The demo will primarily be evaluated on:

- Teaching ability
- Communication skill
- Clarity of explanation
- Student engagement
- Practical knowledge
- Technical understanding
- Ability to simplify difficult concepts

Ideal Candidate

We are looking for someone who can:

Understand AI → Build with AI → Explain AI → Teach AI → Make students interested in AI

Candidates interested in a longer-term association and growing with the training program will be preferred.

How to Apply

Interested candidates can share their interest with us:

- Updated CV
- Short introduction
- AI/technical experience
- Teaching or training experience, if any
- Current availability
- Any previous AI projects, GitHub profile, portfolio, or demo work, if available
- Post that we will schedule a Google call for the Interview
